DETAILED ACTION

The amendment filed 11 May 2009 has been entered.

Response to Amendment

The declaration under 37 CFR 1.132 filed 11 May 2009 is sufficient to overcome the rejection of claims 1-10 based upon Dobrindt (US 2004/0256797).

Claim Objections

The claims are objected to because they do not conform with 37 CFR 1.75 (i). Where a claim sets forth a plurality of elements or steps, each element or step of the claim should be separated by a line indentation.

Claims 1-10 are objected to because of the following informalities: all the "intermediate transport transport [sic] member[s]" (see Claim 1, line 9, etc) should be "intermediate transport member[s]". Appropriate correction is required.

Claim Rejections - 35 USC § 112

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 7 and 9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In Claim 7, line 2-3, it is unclear if the at least one cam plate is one of the at least one cam plate recited in Claim 5.

In Claim 9, line 1, it is unclear to which intermediate transport member(s) are being referred.

Claim Rejections - 35 USC § 102

Claims 1-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Scarlata et al. (US 5,518,230) ("Scarlata").

Claim 1: [a] sheet to be deposited is grasped by at least one rotationally drivable sheet conveyor member with said front edge of said sheet fed into a receptacle, and to deposit said sheet on said stack of sheets, said sheet's front edge is released from a receptacle, through use of a stop, by a stack edge, characterized by releasing said sheet's front edge from said receptacle of said rotating sheet conveyor member, prior to said depositing of said sheet onto said stack, and moving said sheet's front edge into a receptacle of an intermediate transport member where it is further released for depositing said sheet onto said stack of sheets (FIG. 3);

Claims 2, 4: at least one rotationally drivable sheet conveyor member with at least one receptacle (21); intermediate transport member with a receptacle (108);

Claims 3: stop (106);

Art Unit: 3653

Claim 5: at least one cam plate (120);

Claim 6: lever assembly (118/119/125);

Claim 7: at least one lever arm of said lever assembly (125); at least one cam plate (120); intermediate element (elements on end of 125);

Claim 8: essentially horizontally oriented level arm (119); essentially vertically oriented level arm (118); separate cam plate (back support elements on vertical bar of 106/108/116);

Claim 9: spring-fitted (117);

Claim 10: gripper mouth (108).

Response to Arguments

Applicant's arguments filed 11 May 2009 have been fully considered but they are not persuasive.

[1] Referring to the description of Figure 3 in Scarlata it is clear that Scarlata describes a stack height clamp 108 (column 6, line 32ff). [2] Additionally the element in Scarlata that the Examiner used to reject Claim 3: (106) is not a stop for the sheets but a flag, which is attached to clamp 108... (column 6, line 34ff). [3] Finally the element 108 in Scarlata that the Examiner used to reject Claim 10 (108) is not a gripper mouth but a stack height clamp (column 6, line 7ff).

Our 797 application describes a lateral offsetting movement by a roll drive element 16 additionally to the transport by the stacking wheel. The paper is not released from the wheel during the lateral offset movement. [4] In Scarlata (0020 line 13ff) Scarlata describes that the sheet is transported up to the stop bar 14, which is not the case in our application. [5] The lateral movement happens when the substrate is already close to the stop bar (0021, lines 15ff). The roll drive is not at all used for transport in the rotating direction of the stacking wheel but could be used just opposite as breaking element for the further transport of the sheet like element (0009, lines 5ff).

In our application the movement of the gripper mouth is in the same direction as the stacking wheel and not lateral to it. See page 5, lines 6-7 of the present application.

Re. [1], Applicant did not argue how structure 108 does not anticipate Claim 1.

Re. [2], Claim 3 recites that a stop is movable by the intermediate transport

member. Structure 108 does move structure 106 (stop).

Re. [3], structure 108 is a gripper mouth with infinite radius that holds sheets 110.

Re. [4], there is no stop bar 14.

Re. [5], lateral movement or a stacking wheel are not claimed.

Conclusion

Applicant's amendment (intermediate transport <u>transport</u> [sic] member[s]) necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to GERALD W. MCCLAIN whose telephone number is
